

II. CLAIM AMENDMENTS

1.–31. (Cancelled)

32. (Currently Amended) A first mobile terminal for trading a digital collectible card associated with a user of the first mobile terminal, the first mobile terminal comprising:

means for detecting whether a second mobile terminal is available for trading the digital collectable card; and

a short-range wireless communication transceiver for directly communicating with the second mobile terminal for trading the digital collectable card.

33. (Previously Presented) The first mobile terminal of claim 32, wherein the short-range wireless communication transceiver comprises a bluetooth transceiver.

34. (Previously Presented) The first mobile terminal of claim 32, wherein the short-range wireless communication transceiver is operable to communicate within an operational low power radio range.

35. (Previously Presented) The first mobile terminal of claim 32, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting whether the second mobile terminal has a digital collectable card trading capability.

36. (Previously Presented) The first mobile terminal of claim 32, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting the availability of a particular digital collectable card.

37. (Previously Presented) The first mobile terminal of claim 32, further comprising a means for determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

38. (Currently Amended) The first mobile terminal of claim 32, further comprising a means for transferring confirmation and registration messages to a server administering the digital collectible~~collectable~~ card via a mobile communications network.

39. (Previously Presented) The first mobile terminal of claim 32, further comprising a means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal.

40. (Previously Presented) The first mobile terminal of claim 39, wherein the means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal comprises a short-range wireless communication between the first and second mobile terminals.

41. (Previously Presented) The first mobile terminal of claim 32, further comprising a means for determining whether another digital collectable card is available.

42. (Previously Presented) The first mobile terminal of claim 32, wherein the first and second mobile terminals are operable to exchange messages proposing a meeting to trade the digital collectable card.

43. (Currently Amended) A method for trading a digital collectible~~collectable~~ card associated with a user of a first mobile terminal, the method comprising:

detecting whether a first mobile terminal is in the vicinity of a second mobile terminal;

communicating within an operational range of short range wireless communications directly between the first and second terminals for trading the digital collectable card.

44. (Previously Presented) The method of claim 43, further comprising detecting whether the second mobile terminal has a digital collectable card trading capability.

45. (Previously Presented) The method of claim 43, further comprising detecting the availability of a particular digital collectable card.

46. (Previously Presented) The method of claim 43, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

47. (Previously Presented) The method of claim 43, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises exchanging a short-range wireless communication between the first and second mobile terminals.

48. (Currently Amended) The method of claim 43, further comprising transferring confirmation and registration messages to a server administering the digital collectible card via a mobile communications network.

49. (Previously Presented) The method of claim 43, further comprising exchanging messages proposing a meeting to trade the digital collectable card.

50. (Currently Amended) A system for trading a plurality of digital collectable cards comprising:

a first mobile terminal having a user associated with a first card of the plurality of digital collectable cards;

a second mobile terminal having a second user, the second mobile terminal being capable for associating the second user with the first card, the second mobile terminal operable to determine if the first mobile terminal is in the vicinity of the second mobile terminal;

wherein the first and second mobile terminals both comprise a short-range wireless communication transceiver for directly communicating between the first and second mobile terminals for trading the first card.

51. (Previously Presented) The system of claim 50, wherein the short-range wireless communication transceivers comprise bluetooth transceivers.

52. (Previously Presented) The system of claim 50, further comprising:

a mobile communication network; and

a means for determining whether the first and second mobile terminals are in the same cell of the mobile communication network.

53. (Currently Amended) The first mobile terminal of claim 32 further comprising:

a transceiver for cellular mobile wireless communication over a cellular mobile communication network;

an input user interface to request the digital collectiblecollectable card from the cellular mobile communication network;

a memory to store the digital collectiblecollectable card received at the cellular
first mobile phoneterminal;

an output user interface to display the received digital collectiblecollectable card;
and

a processor configured to transmit user identity information to a digital collectiblecollectable card server over the cellular mobile communication network and a request to receive a particular digital collectiblecollectable card from the digital collectiblecollectable card server, wherein the digital collectiblecollectable card is adapted to be associated with the user based on the user identity information transmitted over the cellular mobile communication network from the cellularfirst mobile phoneterminal.

54. (Previously Presented) The first mobile terminal of claim 53, wherein the user identity information includes a password.
